\*See Pairing your device page 6-7

## Learning e3 Remote Key Fobs

1. Ignition power  
ON

### LEARNING KEY FOBBS

Now that we have the remote node, antenna, and control panel installed. The next step is to learn your keyfobs to your system.

2

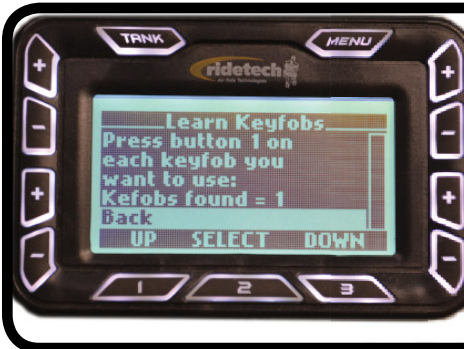

3

1- Turn ignition power on

2- Press the menu button on the e3 display panel. Next scroll down to the wireless remote option, press select (#2)

4

3- Next, select "Learn Keyfobs"

4- Now press #1 on primary remote, then press #1 on the secondary remote. after pressing #1 the panel will show each keyfob found.

5

6

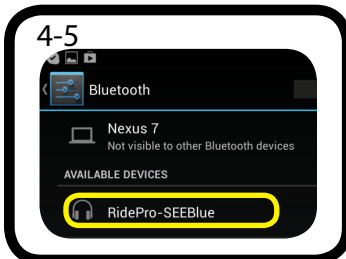

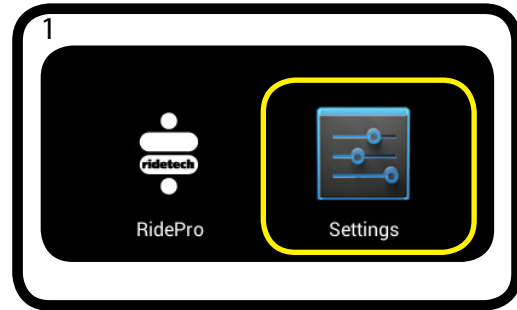

5. When the remotes are learned and keyfob's are found. Select the #2 button to finish.

6. After pressing #2 The screen will show you that the remotes have be learned. Now your remotes are ready to go.

### Pairing Devices (Android)

1- On Android device go to "Settings"

2- Turn Bluetooth ON

3- The LED indicator on the RidePro e3 Bluetooth Module will be solid yellow.

4- Press the Bluetooth button to search for devices.

5- Select "RidePro-SEEBLue" device

6- "Bluetooth pairing request" box will show up.  
- Next it will list a passkey, which is the unique key between the mobile device and the Bluetooth node

\*\* NOTE- you will not be able to see the passkey on the e3 panel.

-Select "Pair" a "paired" icon will be displayed on the Android device. The LED indicator on the RidePro e3 Bluetooth Module will be solid red to indicate the devices are paired

7- Run the RidePro mobile Application.

- LED will be solid green

-if ignition is ON you have full control

-if ignition is OFF you can control only the three presets

-if you don't have the App installed on your device see page 8\*

\*\*\*NOTES: If you turn off Bluetooth, or if the device moves too far away for proper connection, the LED will stay solid Red, indicating that the RidePro e3 Bluetooth Module is paired to a device but it is not connected. When APP is turned on the LED will turn solid green, indicating the RidePro e3 Bluetooth Module is paired and connected.

To Re-Pair or Pair a new mobile device:

1- Turn vehicle ignition ON

2- Wait 10 seconds

3- Turn vehicle ignition OFF

4- Press and hold the "reset" button on the side of the RidePro e3 Bluetooth Module for 5 seconds  
- when the device is ready it will show a solid yellow LED

5-Follow the steps above to pair a new mobile device
